adjustments to reduce overconcentration in disadvantaged communities but emphasized the importance of carefully evaluating future methodology factors to avoid overburdening jurisdictions based solely on their proximity to jobs and transit. He urged the Subcommittee to keep these concerns in mind during development of the seventh-cycle methodology.

Chair Rhodes concurred that lessons learned from the previous RHNA cycle should inform development of the next methodology and emphasized the Subcommittee's role in evaluating past outcomes and new statutory requirements as part of that process.

6. 7th Cycle RHNA Methodology Brainstorm: Social Equity Considerations

Chair Rhodes stated that as they began exploring potential components of the methodology, this discussion provided an opportunity to begin considering how equity-related objectives and outcomes might be incorporated into the allocation process. He noted that the presentation was intended as an initial brainstorming conversation and an opportunity for members to share perspectives before methodology development progressed further.

Ma'Ayn Johnson, Department Manager of Housing, presented an overview of how social equity was incorporated into the sixth-cycle RHNA methodology and outlined potential approaches for consideration in developing the seventh-cycle methodology. She explained that the prior methodology used social equity adjustments to further state housing objectives, including affirmatively furthering fair housing and reducing the overconcentration of lower-income households in disadvantaged communities. Ms. Johnson described how factors such as job access, transit access, disadvantaged community status, and opportunity indicators informed RHNA allocations and income-category distributions. She also reviewed relevant Connect SoCal social equity policies and presented several potential framework options for the next RHNA cycle, including refining the existing methodology, expanding fair housing considerations, emphasizing anti-displacement strategies, simplifying the social equity framework, or pursuing an alternative approach. She emphasized that the presentation was intended to provide background and solicit Subcommittee feedback to inform staff's development of a proposed seventh-cycle RHNA methodology.

Mr. Light commented that the sixth-cycle RHNA methodology created a cycle in which higher-cost coastal communities received increasingly larger affordable housing allocations due to existing housing market conditions. He argued that because local jurisdictions had limited ability to require affordable housing at levels exceeding state requirements, new development often resulted in a greater proportion of market-rate units than affordable units. Mr. Light expressed concern that this dynamic could perpetuate higher future housing allocations without substantially increasing
